

LOCATION-BASED VEHICLE MESSAGING SYSTEM

Abstract of the Disclosure

5 A system may enable vehicle operators to request  
information automatically along the route of travel by  
transmitting information requests, tied to the vehicle's  
current position, to a server. The server may store a  
plurality of informational files associated with particular  
global positioning system coordinates. Upon receipt of a  
request, the files associated with a particular position may  
10 be located and transmitted to the vehicle. The files may be  
stored as audio files so the user may listen to the files  
without being distracted while driving the vehicle.
